The patent relates to novel interleukin-17-like receptor CC protein (IL-17RLP). IL-17RLP is a homologue of the II-17 receptor and has a wide range of cytokine receptor-like activities. II-17RLP or its caponists may be used to enhance host defenses against resistant chronic and activation of microbicidal leukocytes. It may also be used to and activation of microbicidal leukocytes. It may also be used to cincrease T-cell proliferation by stimulating IL-2 biosynthesis, for the creatment of T-cell mediated autoimmune diseases and lymphocytic concentrates. II-17RLP may also be used to regulate hematopoiesis and to creat segsis. Extracellular II-17RLP domains may be used as antagonists of II-17RLP. II-17RLP agonists and antagonists can also be used to condulate II-6 expression, useful in treatment of cancers such as composition of concers such as concerns of the concerns of concerns of the concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of concerns of c

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
